

Srihitha Thotakura

Final-Year Computer Science Undergraduate

srihithathotakura@gmail.com | 9381249923 | github.com/srihithathotakura | Portfolio

Education

- **B.Tech in Computer Science Engineering**, Amrita Vishwa Vidyapeetham, Coimbatore — CGPA: 7.96/10 (*July 2023 – Present*)
- **Intermediate (Class XII)**, Narayana Jr. College, Vijayawada — 90.3%
- **SSC (Class X)**, Sikhara EM High School, Vijayawada — 96.6%

Technical Skills

Languages	Python, Java, C, C++, Rust, JavaScript
Frontend & Mobile	React.js, HTML5, CSS3, Flutter, Dart
Backend	Node.js, Express.js, REST APIs, OAuth 2.0, JWT Authentication, Tauri
Databases	MongoDB, PostgreSQL (Supabase), Firebase Firestore, SQLite, MySQL
Data & ML	Pandas, NumPy, Scikit-learn
Tools & Practices	Git, GitHub, Agile, Linux, Vite

Projects

PasswordPal — Zero-Knowledge Cross-Platform Password Manager

Tauri, Rust, React, Node.js, PostgreSQL (Supabase), SQLite

Frontend · Backend

- Built a zero-knowledge desktop password manager where all encryption (AES-256-GCM, Argon2id) runs locally in Rust; the server stores only encrypted blobs and double-hashed auth derivatives.
- Engineered an offline-first vault with local SQLite storage, automatic delta-sync on reconnect, and version-based conflict detection.
- Implemented TOTP multi-factor authentication and breach checking via the HIBP k-Anonymity API; released v0.2.1 with cross-platform installers for Windows, macOS, and Linux.

Autofy — No-Code Automation Platform for Education

React.js, Node.js, Express.js, MongoDB, OAuth 2.0, JWT

Live Demo · GitHub

- Built a Zapier-style SaaS automation builder for education, connecting apps like Gmail, Calendar, and Drive into drag-and-drop workflows.
- Owned the student module end-to-end — registration, exam scheduler, and workflow builder — with Google OAuth and JWT-based sessions.
- Delivered role-based dashboards powered by real-time MongoDB aggregation; deployed with a production Render + Vercel pipeline.

AURA — AI-Powered Fashion E-Commerce App

Flutter, Dart, Firebase Firestore, Gemini AI

GitHub

- Contributed to a cross-platform Flutter app (Android/iOS/Web) with a full shopping flow — browse, bag, checkout — backed by real-time Firestore data.
- Built the in-app AI chatbot supporting 5 regional languages and contributed to animated dark-mode theming.

Emergency Dispatch Management System

Java, Dijkstra's Algorithm, Priority Queue, HashMap

- Simulated a multi-agency emergency dispatch system using Dijkstra's algorithm for shortest-path routing and a priority queue for dispatch order, improving response efficiency by 15% in test scenarios.

Publications

Comparative Evaluation of Bluetooth Based Distance Measurement Techniques Across Multiple Performance Metrics

Accepted — IEEE CONECCT 2026, Track: Intelligent Networks

- Co-authored a comparative study of four BLE indoor-ranging techniques (RSSI, RTT, AoA/AoD, Channel Sounding) across 12 evaluation dimensions.
- Experimentally validated RSSI and RTT on ESP32-C6 boards in library and corridor environments; RTT showed significantly greater multipath resilience and measurement stability across a 0.5–5 m range.
